HOTEL BOOKING
TEST PLAN & TEST SUITE

Fictional Website: Azure Haven Hotel & Suites

Project Challenge: Hotel Booking Test Plan and Suite

Prepared by: Maryam Masood

Phase: QA Foundations and Manual Testing Mastery

Submission: Formatted spreadsheet and 4–5 page PDF report

Date: 30 October 2026

Project Overview

This mini project defines a manual test plan and a 40-case test suite for a fictional hotel booking website. Testing is organized into four modules: Search & Availability, Room Selection & Details, Guest Details & Booking Form, and Booking Confirmation & Summary. A Requirement Traceability Matrix (RTM) maps each test case to one or more requirements.

Important Test Boundary

Azure Haven is a front-end demonstration only. It does not connect to live hotel inventory, a database, payment gateway, email service or reservation system. Therefore, this report defines test scenarios and expected behavior; it does not claim that 40 tests have been executed. Execution status in the spreadsheet is initially set to **Not Run**.

Prepared for manual QA practice

1. Test Plan

Objective

Verify that a user can search for a stay, review room options and prices, enter valid guest details, and receive an accurate demo confirmation. Negative and boundary checks ensure invalid input is handled clearly.

Area	Plan / Description
In scope	Homepage navigation; destination; date and guest search; room catalogue; room pricing; room selection; booking form fields and validation; confirmation reference; total calculation; modal controls; responsive layout.
Out of scope	Authentication; live room inventory; payment processing; email/SMS notifications; database persistence; cancellations/refunds; security penetration testing.
Approach	Manual functional testing with positive, negative, boundary, content, calculation, usability and compatibility scenarios. Desktop and mobile viewport checks are included.
Environment	Chrome/Edge on desktop; Android/mobile viewport at approximately 390px; internet access for remote images; fictional test data.
Entry criteria	Page is accessible; room names/prices and business rules are agreed; test data and browser are available.
Exit criteria	All 40 cases executed; all High-priority cases pass or have defects logged; no unresolved critical blocker; results and limitations documented.
Test data	Future dates such as 10–13 Nov 2026; guest counts 1–4; valid and invalid email formats; room rates: Rs.18,000 / Rs.27,000 / Rs.32,000 per night.
Risks / assumptions	No backend exists; external images depend on internet. Same-day booking policy is not fully specified and needs product-owner confirmation.

Three-Day Schedule

Day	Activities
Day 1	Review website and requirements; define scope, modules, risks and test data; prepare test plan.
Day 2	Design and review 40 test cases; assign priorities; build RTM and formatted workbook.
Day 3	Execute available manual checks; capture evidence; compile PDF; review and submit deliverables.

2. Test Modules & Test-Suite Summary

Module	Coverage	Cases
1. Search & Availability	Destination, date validation, past/same-day dates, guest count, mobile search layout.	10
2. Room Selection & Details	Room listing, descriptions, nightly prices, room-to-form selection, responsive cards and images.	10
3. Guest Details & Booking Form	Required fields, email format, date validation, guest options and selected-room retention.	10
4. Booking Confirmation & Summary	Reference generation, guest name, price calculations, invalid data blocking, modal controls and disclaimer.	10

Test Suite Distribution

Metric	Count / Detail
Total test cases	40
Modules	4 (10 test cases each)
Requirements	17 requirements mapped
Priority distribution	High: 22 · Medium: 13 · Low: 5
Test types	Positive, negative, boundary, content, calculation, compatibility, visual and usability
Initial execution status	Not Run — update Pass / Fail / Blocked after execution.

Priority Guidelines

High: Core booking journey, mandatory validation, date rules and totals. **Medium:** Content correctness, guest selection, responsive behavior and confirmation details. **Low:** Visual asset checks and secondary modal usability.

Defect Severity Guidance

Critical: booking flow unavailable. **High:** key validation or calculation fails. **Medium:** partial feature/content issue. **Low:** cosmetic or minor usability issue.

3. Requirement Traceability Matrix (RTM)

The RTM provides bidirectional traceability from requirements to test cases. Every requirement below has at least one mapped test case. The full mapping is also available in the spreadsheet tab named “Traceability Matrix”.

Req ID	Requirement summary	Mapped test cases
REQ-01	Search form accepts a destination/property selection.	TC-001
REQ-02	Search form requires valid check-in and check-out dates.	TC-001, TC-004, TC-005
REQ-03	Past dates are not allowed; check-out must be after check-in.	TC-002, TC-003, TC-006, TC-007, TC-028
REQ-04	Guest selector supports 1 to 4 guests and retains selection.	TC-008, TC-009, TC-029
REQ-05	Three room categories are displayed with correct names and descriptions.	TC-011, TC-012
REQ-06	Room nightly prices are Deluxe Rs. 18,000, Premium Rs. 27,000, Family Rs. 32,000.	TC-013, TC-014, TC-015
REQ-07	Each room card opens booking form with the correct room selected.	TC-016, TC-017, TC-018, TC-030
REQ-08	Room cards, images and controls are usable on mobile.	TC-010, TC-019, TC-020
REQ-09	Booking form requires name, email, phone, check-in, and check-out.	TC-021, TC-022, TC-023, TC-025, TC-026, TC-027
REQ-10	Email must use a valid email format.	TC-023, TC-024
REQ-11	Booking form retains selected room, dates and guest count.	TC-021, TC-030
REQ-12	Booking confirmation generates a reference and displays guest name.	TC-021, TC-031, TC-032
REQ-13	Estimated room total equals nightly rate multiplied by nights.	TC-033, TC-034, TC-035
REQ-14	Invalid booking data must not generate a confirmation.	TC-028, TC-036
REQ-15	Booking modal can be closed using close control or outside click.	TC-037, TC-038
REQ-16	Website clearly identifies the booking flow as a demo; no real payment/reservation occurs.	TC-039
REQ-17	Booking modal is responsive and usable on mobile.	TC-040

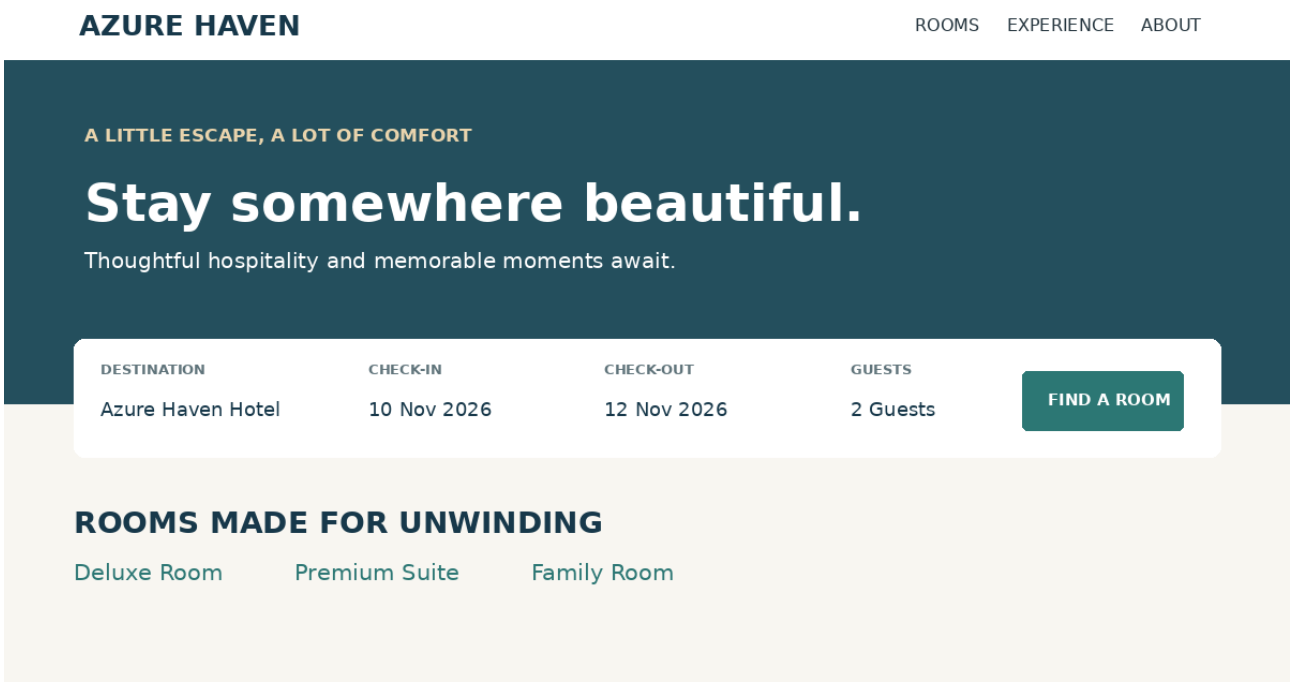

Coverage Result

17 of 17 requirements are mapped. All 40 test cases have at least one requirement mapping. Some test cases map to multiple requirements where a single user journey validates more than one behavior.

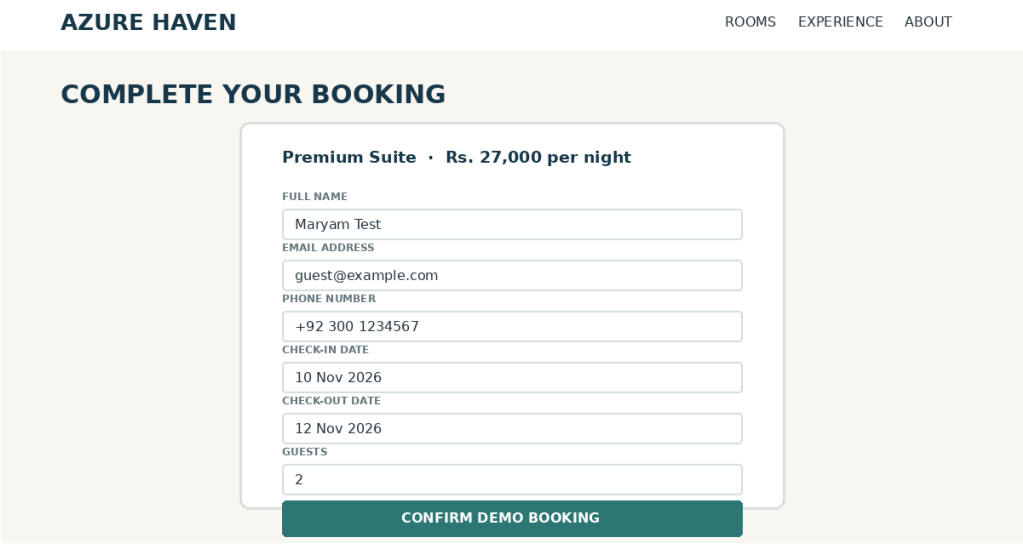

4. Screenshots & Conclusion

The following illustrative screenshots represent the fictional Azure Haven website screens used to design the test scenarios. They are mock evidence images for the project report, not proof of test execution.

Homepage and Search Form

Booking Form

Conclusion

This project provides a structured manual QA foundation for a hotel booking website: a defined test plan, four functional modules, 40 prioritized test cases, and an RTM covering 17 requirements. The next step is to execute each case on the website, record actual results, attach genuine execution screenshots, and log defects with severity, steps to reproduce and supporting evidence. The current workbook is prepared for that execution workflow.
